Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (Original) A process for synthesizing biopolymers by stepwise assembly from synthesis building blocks which carry protective groups, where at least one synthesis building block which carries a two-stage protective group is used, where the two-stage protective group is activated by an illumination step and eliminated by a subsequent chemical treatment step, characterized in that the activation takes place by elimination of a photoactivatable protective group which is selected from triplet-sensitized photoactivatable groups, labeled photoactivatable groups and triplet-sensitized and labeled photoactivatable groups.
- 2. (Original) The process as claimed in claim 1, characterized in that the chemical treatment step comprises a treatment with base, a treatment with acid, an oxidation, a reduction or/and a catalyzed, e.g. enzymatic, reaction.
- (Original) The process as claimed in claim 2, characterized in that the chemical treatment step comprises an acid treatment.
- 4. (Currently Amended) The process as claimed in any of claims 1 to 3

 claim 1, characterized in that a derivatized trityl group is used as two-stage

protective group.

5. (Original) The process as claimed in claim 4, characterized in that the synthesis building block with the two-stage protective group has the general formula (I):

$$R_2$$
 M_m
 M_m
 M_m
 M_m
 M_m

where R_1 and R_2 are each independently selected from hydrogen, (L)- R_3 , -O-(L)- R_3 , N(R_3)₂, NHZ and M,

 R_3 is a C_1 - C_8 alkyl group, a C_2 - C_8 -alkenyl group, a C_2 - C_8 -alkynyl group, a C_6 - C_{25} -aryl group or/and a C_5 - C_{25} -heteroaryl group, which may optionally have substituents,

L is a linker group which is optionally present,

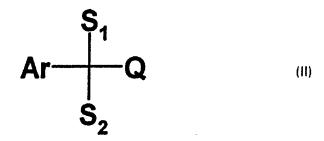

X is the synthesis building block,

M is in each case independently a label optionally linked via a linker group, and m is in each case independently an integer from 0 to 4,

Y is in each case independently a photoactivatable protective group as claimed in claim 1,

Z is an amino protective group, and where R₁ or/and R₂ may optionally be replaced by Y.

(Currently Amended) The process as claimed in any of claims 1 to 5
 <u>claim 1</u>, characterized in that a photoactivatable group of the general formula
 (II) is used

in which Ar is a fused polycyclic fluorescent aryl or heteroaryl, S_1 and S_2 are each independently selected from hydrogen, a C_1 - C_8 -alkyl group, a C_2 - C_8 -alkenyl group, a C_2 - C_8 -alkynyl group, a C_6 - C_{25} -aryl group or a C_5 - C_{25} -heteroaryl group, each of which may optionally have substituents, and C_8 is a group for linking the photolabile component to the component which can be eliminated chemically.

7. (Currently Amended) The process as claimed in any of claims 1 to 5

<u>claim 1</u>, characterized in that a photoactivatable group of the general formula (III) is used:

$$T_{5}$$

$$Q_{1}$$

$$T_{5}$$

$$Z_{1}$$

$$Z_{2}$$

$$Z_{1}$$

$$Z_{2}$$

$$Z_{1}$$

$$Z_{2}$$

$$Z_{1}$$

$$Z_{2}$$

$$Z_{1}$$

$$Z_{2}$$

$$Z_{1}$$

$$Z_{2}$$

$$Z_{1}$$

in which T_1 , T_2 , T_3 , T_4 , T_5 and T_6 are each independently selected from hydrogen, C_1 - C_8 -alkyl, C_2 - C_8 -alkenyl, C_2 - C_8 -alkynyl, C_1 - C_8 -alkoxy, C_2 - C_8 -alkoxycarbonyl, C_6 - C_{20} -aryl or aryloxy or/and C_5 - C_{25} -heteroaryl or heteroaryloxy, each of which may optionally have substituents, and T_1 or/and T_2 may additionally be trialkylsilyl, and one of T_3 and T_4 may be NO_2 , with the proviso that the other is then H, Q_1 is hydrogen, optionally substituted C_1 - C_4 -alkoxy or $di(C_1$ - C_4 -alkyl)amino, Z_1 and Z_2 together are -OC(O)-, -NT₇C(O)- or -CT₈=CT₉, where T_8 and T_9 are defined as T_3 - T_6 , and T_9 may additionally be NO_2 , and adjacent groups T may optionally form a 5- or 6-membered carbocyclic or heterocyclic, saturated or unsaturated ring, and T_9 is a group for linking the photolabile component to the component which can be eliminated chemically.

8. (Currently Amended) The process as claimed in any of claims 1 to 5

claim 1, characterized in that a photoactivatable group of the general formula

(IV) is used:

$$\begin{array}{c|c} & & & & & & & & \\ & & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & & \\ & \\ & & \\ &$$

in which U_1 , U_2 , U_4 and U_5 are each independently selected from hydrogen, halogen, NO_2 , U_6 , (L)- U_6 , O-(L)- U_6 , $N(U_6)_2$ and NHZ, U_6 is C_1 - C_8 -alkyl, C_2 - C_8 -alkenyl, C_2 - C_8 -alkynyl, C_6 - C_{25} -aryl or C_5 - C_{25} -heteroaryl, each of which may optionally have substituents, L is a linker group which is optionally present, U_3 is a label optionally linked via a linker group, and Q is a group for linking the photolabile component to the component which can be eliminated chemically.

9. (Currently Amended) The process as claimed in any of claims 1 to 5
<u>claim 1</u>, characterized in that a photoactivatable group of the general formula
(V) is used:

$$V_4$$
 V_2
 V_5
 V_6
 V_7
 V_8
 V_8
 V_8
 V_8
 V_8
 V_8
 V_9
 V_9

in which V_1 , V_2 , V_3 , V_4 , V_5 and V_6 are each independently selected from hydrogen, halogen, NO_2 , V_7 , (L)- V_7 , O-(L)- V_7 , $N(V_7)_2$, NHZ and M, where V_7 is C_1 - C_8 -alkyl, C_2 - C_8 -alkenyl, C_2 - C_8 -alkynyl, C_6 - C_{25} -aryl or C_5 - C_{25} -heteroaryl, each of which may optionally have substituents, L is a linker group which is optionally present and V_5 and V_6 may additionally be trialkylsilyl, M is a label optionally linked via a linker group, and Q is a group for linking the photolabile component to the component which can be eliminated chemically.

- 10. (Currently Amended) The process as claimed in any of claims 1 to 9

 claim 1, characterized in that the two-stage protective group carries a plurality

 of labeling groups which can be detected independently of one another.
- 11. (Original) The process as claimed in claim 10, characterized in that a first label is linked to the photolabile component and a second label is linked to the component which can be eliminated chemically.
- 12. (Currently Amended) The process as claimed in any of claims 5 to 11 claim 5, characterized in that the two-stage protective group comprises at

- 13. (Original) The process as claimed in claim 12, characterized in that a fluorescent label is introduced on the trityl framework of a compound (I).
- 14. (Currently Amended) The process as claimed in any of claims 1 to 13

 claim 1, characterized in that the biopolymers are selected from nucleic acids,
 nucleic acid analogs, peptides and saccharides.
- 15. (Original) The process as claimed in claim 14, characterized in that the biopolymers are selected from nucleic acids and nucleic acid analogs.
- 16. (Original) The process as claimed in claim 15, characterized in that phosphoramidites are used as synthesis building blocks.
- 17. (Original) The process as claimed in claim 16, characterized in that phosphoramidite building blocks carrying the two-stage protective group on the 5'-O atom are used.
- 18. (Currently Amended) The process as claimed in any of claims 1 to 17

 claim 1, characterized in that the synthesis of the biopolymers includes the use of spacer and/or linker building blocks.

- 19. (Currently Amended) The process as claimed in any of claims 1 to 18 claim 1, characterized in that the synthesis of the biopolymers is carried out on a solid phase.
- 20. (Original) The process as claimed in claim 19, characterized in that a location-dependent synthesis of a plurality of biopolymers is carried out with in each case a different sequence of synthesis building blocks on a single support.
- 21. (Currently Amended) The process as claimed in any of claims 1 to 20 claim 1, characterized in that a synthesis building block with two-stage protective group is used for quality control.
- 22. (Original) Compounds of the general formula (I)

$$R_2$$
 M_m
 M_m
 M_m
 M_m
 M_m

where R₁, Y, M and m are defined as in claim 1, and X is a synthesis building

block or a leaving group, where R₁ or/and R₂ may optionally be replaced by Y.

- 23. (Original) Compounds as claimed in claim 22, characterized in that they carry a plurality of labels detectable independently of one another.
- 24. (Currently Amended) Compounds as claimed in claim 22 or 23, characterized in that they carry at least one fluorescent label.
- 25. (Original) The use of compounds of the general formula (I) as synthesis building blocks or for preparing synthesis building blocks for the synthesis of biopolymers.
- 26. (Original) The use as claimed in claim 25 for quality control during the synthesis of biopolymers on a solid support.
